

— WORKFORCE 2.0 • FOR SAP ECC & S/4HANA

Your 24/7 Digital AI Workforce for SAP

Agentic teammates that **reason, recommend, and act** over live SAP data — combining human judgment with always-on AI analysis across finance, sales, supply chain, and production.

◆ Built on SAP BTP

◆ HANA Cloud + AI Core

◆ Clean Core • API Policy Compliant

◆ Human-in-the-Loop

— WHY WORKFORCE 2.0

Augment every SAP user. Govern every action.

Workforce 2.0 deploys agentic teammates that understand your SAP data, your business vocabulary, and your governance rules — so AI scales across the enterprise without bypassing the controls your business depends on.

Turn every SAP user into a 10x operator

Give every user an AI expert that understands live SAP data, answers business questions in natural language, recommends next steps, and supports faster decisions across finance, sales, supply chain, and production.

Activate agentic AI in 15 hours — governed end to end

Activates on your existing SAP ECC or S/4HANA (incl. RISE) through hyperconnected Data Products that stream live business events into HANA Cloud. Every action runs under BTP security, RBAC, and human-in-the-loop controls.

Clean Core & SAP API Policy compliant

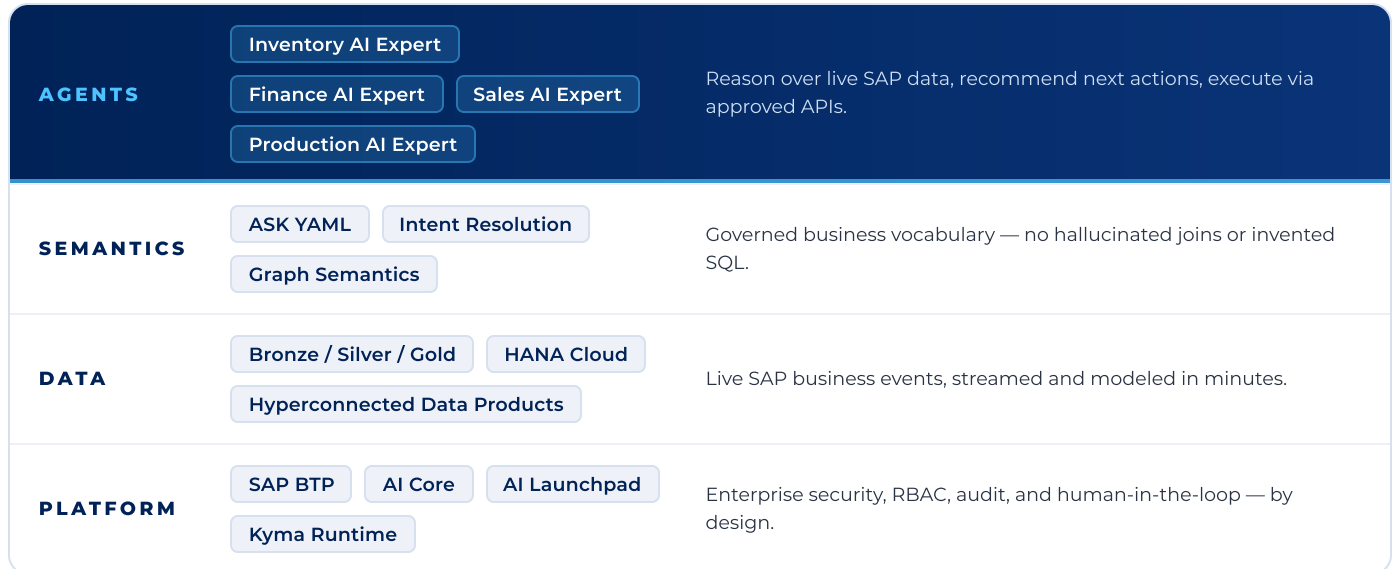

AI teammates extend SAP without modifying the core. Every action flows through SAP published APIs, fully aligned with SAP API Policy v4/2026, which restricts agentic AI to approved interfaces — upgrade safe and audit ready.

CAPABILITIES & ARCHITECTURE

SAP-NATIVE ARCHITECTURE

How it works.

The Workforce 2.0 stack

01

Translate SAP technical fields into governed business vocabulary

ASK (Agentic Semantic Knowledge) is a YAML semantic contract that turns cryptic SAP tables and fields into governed business vocabulary. Teams align on revenue, margin, and stock, while agents avoid hallucinated joins, SQL, and invented logic.

02

Model SAP Data Products with low-code, no-code tooling

Data and SAP teams design hyperconnected Data Products visually — selecting tables, joins, and business definitions without hand-written code. Stand up new **Bronze, Silver, and Gold** Data Products in hours instead of weeks, accelerating every downstream AI and analytics use case.

03

Run governed AI on SAP BTP, HANA Cloud, and AI Core

Operates natively on SAP BTP with hyperconnected Data Products in HANA Cloud, and agent orchestration through SAP AI Core and AI Launchpad. Deploy AI inside your existing SAP security and compliance model — **clean core, audit-ready**, and aligned to SAP's roadmap.
